[Lanky's implementation of Lw's](#)

Hi forum

I do hope that by doing this in coming days that I will be of help to someone somewhere in the world.

Let Me say from the start that **Victor** is the **Master Teacher** that created this Method in the First place.

All I did was tweak it suit Me & hopefully others will get some benefit from it.

I have not & will not ever stray too far away from **Victor's Teachings**.

His Method works & That is That.

We have a saying here in Australia & that is....."When you are onto a good thing stick to it."

One of the Main things that you will notice is the different ways we bet the same Method.(**Sam** does differently again)

Victor uses the cancellation betting plan.

And I mainly use the 6 point divisor plan.(especially when I am hunting the Ls which will be covered near the end)

Having said that I still use the first two bets from the cancellation plan when betting the Ws.

Eg: I bet 1x1 & if that bet loses I then bet 2x2

I also intermingle or mix the Lw & the LLw patterns when betting the Ws.

My patterns were Lw x 3 & LLw x 3 to define & trigger for the the bets on the Ws.
It is far better for me to explain the little tweak I have made in an example taken from one of my real session.
Which I will do in the following post.

The one thing that I can guarantee You is that **Victor,Sam & Myself** will be doing our very best for you all.

Lanky

Firstly to be successful with this system you have to embrace.

Victor's whole methodology.

You have to become a strategy player that tries to get the betting timeline right for when the dispersions are in your favour to win with.

That will mean that you will have to have the discipline necessary
To stop betting when you are behind & wait in virtual mode.

Not betting until the patterns turn again in your favour to give you the best chance of getting the timeline right to win the bet that you are about to have.

As Victor says you might be about to create history by having the longest Winning or Losing run ever in the history of roulette.

You will only get that chance by learning his Lw patterns.

The Man is so great & humble that He once said that these patterns have probably been there since roulette started & its just that we have never seen them before.

That is something I truly believe.

But it took Victor to see & find them & share & teach them to us.

If there is anything that I say or teach that someone anyone anywhere in the world ever wins even $1.

Then all the credit belongs to Victor 100 %.

Ok Guys here we go with the Lw's on the LD=Last two dozens formed

Now we are going to deal with winning with the Lw & the LLw patterns only with the Ws & stopping after we hit 3 Ls
In a row Eg:LLL < we will stop betting whenever this happens.

We always have to stop when we are betting the Ws when LLL comes up
It is the most important signal that the system could be going bad with the Ws.

This is important only you won't see the true importance of it until later when we are hunting the Ls

Trust Me on this part.

I am only doing this the way that I think you would like to be taught.
I think You can see the patterns better this way & it may be quicker to learn.

Ok here we go betting the Lw & the LLw Patterns only & with them intermingled or mixed together.
I will explain this idea as we go along.

We wont be doing any betting just concentrating on the patterns

I am doing it this way so you can see the patterns better

19- -
7=2/1- <<19 & 7 are the numbers spun..2/1 are the Last two Dozens that formed.
Like 2/1 means 2nd & 1st dozens formed
15=2/1-W
25=3/2-L
33=3/2-W=(Lw x1)
7=1/3-L
12=1/3-W= (Lwx2)
25=3/1-W
18=2/3-L
15=2/3-W= (Lw x 3) so the next L we will bet for the W to come.
20=2/3-W
31=3/2-W
13=2/3-W
7=1/2-L
21=2/1-W **<bet=Won**
14=2/1-W
20=2/1-W
(1)=1/2-W
26=3/1-L
10=1/3-W **<bet=Won**
34=3/1-W
24=2/3-L
7=1/2-L **<bet Lost** (now bet that the LLw will form)(Lw pattern now dead)
19=2/1-W **<bet=Won** (and LLw pattern alive)
29=3/2-L
32=3/2-W (Lw x 1)
(Z)=0.....0 **<bet=Lost**
6=1/3-L **<bet lost** (and LLw pattern dead)
11=1/3-W=(Lw x 2)

But you have to realise that I have got better at the patterns myself.
And I have made a slight adjustment that is more inline with what Victor first taught.
Ok so now we are going to mix the patterns a little & see what we get.

If you look back you will see its gone

LLwLwLw……..just see that there is 3 single Ws mixed in with the Ls

Now if I Mark the Lw pattern in this way [ ] so its easy for you see.

L [Lw] [Lw] [Lw] then that would be (Lw x 3) so we now bet when the next L comes for the W.

We continue on.

23=2/1-L
25=3/2-L **<bet=Lost** (Lw now dead)(bet that LLw forms)

(Z)=0..... **<bet= Lost**
7=1/3-L **<bet=Lost** (3 Ls in a row) stop all betting & Track patterns again

If after 3 Ls=LLL comes.
I will not bet the LLW to form until there is a definite pattern formation of either
The Lw pattern by 3 or the LLw pattern by 3

29=3/1-W
19=2/3-L
9=1/2-L
7=1/2-W <(LLw x1)
36=3/1-L
17=2/3-L
12=1/2-L < LLL start to track again
11=1/2-W
35=3/1-L
17=2/3-L
6=1/2-L <LLL start to track a gain
(1)=1/2-W
29=3/1-L
13=2/3-L
22=2/3-W <LLw x1
30=3/2-W
7=1/3-L
12=1/3-W <Lw x 1
4=1/3-W
13=2/1-L
20=2/1-W < Lw x 2

If you look back you will see its gone

LLwLwLw……..just see that there is 3 single Ws mixed in with the Ls

Now if I Mark the Lw pattern in this way [ ] so its easy for you see.

L [Lw] [Lw] [Lw] then that would be (Lw x 3) so we now bet when the next L comes for the W.

We continue on.

9=1/2-W
27=3/1-L
8=1/3-W **<bet=Won**
24=2/1-L
16=2/1-W **<bet=Won**
10=/2-W
21=2/1-W
35=3/2-L
32=3/2-W **<bet=Won**

(2)=1/3-L
16=2/1-L **<bet= Los**t (Lw pattern now dead)(bet LLw will form)
6=1/2-W **<bet= Wo**n (and LLw pattern alive)

Now here is 2nd part of mixing the patterns.
We were betting Lw right ??
But because its gone LLw we are going to bet the 2nd spin after an L comes
What we are saying is we will bet liks this L w >now bet for the W to come.=L w [w]<bet for this w to come.

We continue

26=3/1-L
30=3/1-W
34=3/1-W **< bet=Won**
16=2/3-L
34=3/2-W <<<now look back its gone LLwLwwLw=(Lwx3) bet W after next L(we now have both patterns alive)
24=2/3-W **< bet=Won**
4=1/2-L
11=1/2-W **< bet=Won**
16=2/1-W **< bet=Won**
10=1/2-W

From 76 spins

I make it 18 bets for 11 wins & 7 losses & 2 of those losses was a zero
(later we will have the zero working for not against us as more patterns unfold)

That's 61% winners just betting the Lw & the LLw patterns.

So that means we sat in virtual for 58 spins

That's because we only bet on 2 patterns on the Ws

And this was a bad pattern to be betting the Ws that Way.
But we will turn this around later.

It's the concept or the idea of the patterns that I am teaching you at the moment.

Grasp that & we are on our way to better things.

Take your time.

Take as much time as you need.

I have to teach you at the speed you want to be taught.

Some will be quicker then others.

Its not about being quick its about being focused on & remembering the patterns that matters

Do this & you are getting a winning mindset.

Your Friend

Lanky

Ok This time using the exact same numbers that we used for the LD=Last Two Dozens to come.

Only this time we will do the JD or the Jump Dozen & see if the Lw & the LLW still works on them

Only this time we are betting against the Dozen that just came & want the other 2 to come.

Because we are tracking 2 patterns its possible that both will be tracked at the same time so I will put the tracked patterns in brackets ( ) to make it easier & with comments.

And if we are betting & tracking the Lw & then the LLw comes then that will kill the Lw betting.

But from there the LLw pattern can be used in 3 ways.

1) Once the LLw comes it becomes the dominant pattern & we bet it straight away so we would bet the 2nd spin after the 1st L came Like either LL[w]<< or Lw[w]<<

2)The spins could have been like this Lw Lw L[Lw] so it can be counted as the 1st Lw

3) And we always bet for the LL[w] to Win EXCEPT when 3 Ls come =LLL then we wait for one or the other pattern to form 3 times.

The Same applies to the LLw the killers to continuing betting the LLw pattern are LwL or LLL

Of course if LLL comes at any time when we are betting the Ws then we have to stop & retrack again.

Ok here we go Lets see what happens.

19=0
7=W
15=W
25=W

33=L
7=W=(Lw x1)
12=L
25=W=(Lw x2)
18=W
15=L
20=L <<next spin bet LLw will form
31=W **<<bet Win** (and LLw alive)
13=W
7=W
21=W
14=L
20=L
(1)=W **<<bet Win** (and LLw still dominant)
26=W
10=W
34=W
24=W
7=W
19=W
29=W
32=L
(Z)=0.....
6=W << (Lw x 2)
11=L **<<bet Lost** (LLw dead)
23=W<<(Lw x 3) Bet W after next L
25=W
(Z)=0
7=W
29=W
19=W
9=W
7=L
36=W **<< bet Win**
17=W
12=W
11=L
35=W **<<bet Win**
17=W
6=W
(1)=L
29=W **<< bet Win**
13=W
22=L
30=W **<< bet win**
7=W
12=L
4=L **<< bet Lost** (bet LLw to form)&(Lw dead)

13=W **<< bet Win** (LLw dominant)
20=L
9=W <<(Lw X 2)
27=W**<< bet Win**
8=W
24=W
16=L
10=W<<(Lw X 3)Bet W after next L **(now have both patterns alive)**
21=W**<<bet Win**
35=W
32=L
(2)=W **<< bet Win**
16=W **<<bet Win**
6=W
26=W
30=L
34=L **<< bet Lost** (bet LLw to form)(Lw dead)
16=W **<< bet Win** (LLw dominant)
34=W
24=W
4=W
11=L
16=W << (Lw X 2)
10=W **<<bet Win**

We had 16 bets for 13 wins & 3 losses =81 % of winners

Still only betting on the 2 patterns of Lw & LLw

Lanky

Hi guys

As You have probably guessed by now I am a pattern freak.

I love Patterns.

They help me to either bet the Ws to win or the Ls to win.

Today I want to introduce just one more pattern .That compliments the Lw pattern when betting the Ws .You could say that its an extension to the Lw pattern.

As we know if it goes LwLwLw ….then we simply bet on the W to win after the next L.

But if it goes LwLww Lww then after the next L comes I will bet that W W comes.

Now lets extend that idea to this scenario.

If it goes LwLwwLwww or more Ws then after the next L I will bet the Ws until either LL or LwL or LwLw comes depending on what pattern we would be on anyway.

It's the position of where the 4th L finishes or ends that matters in this pattern.

What we are trying to do is eat up as many Ws as we can before the system turns bad on us.

Just follow along & you will get the idea & we will see if we can profit some more from it.

Now remember even though this session was a real one it is a relative bad session to win on the Ws but later on you will be glad that its here when we hunt the Ls

Once again I won't bet.(I want to leave that until later)

And this is a continuation the LD post I first did.

But I will put where we would have bet & the result of either WON or LOST

19- -
7-2/1-<<The 7 is the number spun..2/1 are the Last two Dozens that formed.
Like 2/1 means 2nd & 1st dozens formed
15-2/1-W
25-3/2-L
33-3/2-W (Lwx1)
7-1/3-L
12-1/3-W (Lwx2)
25-3/1-W
18-2/3-L
15-2/3-W (Lwx 3) bet W on next L
20-2/3-W
31-3/2-W
13-2/3-W
7-1/2-L
21-2/1-W=Bet won(now look back its gone LwLwwLwwwwL) so we keep betting Ws
14-2/1-W=Bet won
20-2/1-W=Bet won
(1)-1/2-W=Bet won
26-3/1-L=Bet LOST
10-1/3-W=Bet won
34-3/1-W=Bet won
24-2/3-L=Bet LOST
7-1/2-L= Bet LOST (NOW BET LLw TO FORM)
19-2/1-W=bet won (AND LLw DOMINANT)

29-3/2-L
32-3/2-W
(Z)--0.....=Bet LOST
6-1/3-L=Bet LOST (and LLw dead)
11-1/3-W (Look back & its gone LLwLw0Lw ignore the 0 & its= Lwx3)(W after next L)
23-2/1-L
25-3/2-L= Bet LOST (bet LLw to form)
(Z)--0...=.Bet LOST
7-1/3-L = Bet LOST (LL0L ignore the 0 & its LLL or Lx3) stop betting & wait for patterns to form.
29-3/1-W
19-2/3-L
9-1/2-L (remember after 3 Ls we don't bet the LLw pattern to form)
7-1/2-W (tracked LLwx1)
36-3/1-L
17-2/3-L
12-1/2-L (3 Ls) re-track
11-1/2-W
35-3/1-L
17-2/3-L
6-1/2-L (3Ls)re-track
(1)-1/2-W
29-3/1-L
13-2/3-L
22-2/3-W (LLwx1)
30-3/2-W
7-1/3-L (Lwx1)
12-1/3-W
4-1/3-W
13-2/1-L
20-2/1-W (Lwx2) but look back its gone LLwwLwwLw=Lwx3 (bet W after next L)
9-1/2-W
27-3/1-L<<start betting W W to come its now gone LLwwLwwLwwL
8-1/3-W= Bet won
24-2/1-L= Bet LOST (stop betting the 2nd W to come revert back to just the Lw pattern)
16-2/1-W= bet won
10-1/2-W
21-2/1-W
35-3/2-L
32-3/2-W=bet won
(2)-1/3-L
16-2/1-L=bet LOST (Lw pattern dead) bet LLw to form
6-1/2-W=bet won (LLw dominant)&(Lwx1)
26-3/1-L
30-3/1-W (Lwx2)
34-3/1-W= bet won
16-2/3-L
34-3/2-W <<(Lwx3) **So now we have both patterns alive**

24-2/3-W=bet won

4-1/2-L<<look back its now gone s to win LLwLwwLwwL=bet W W to come(but we have both patterns alive so this won't matter here in this instance because its the same thing really.

11-1/2-W=bet won
16-2/1-W=bet won
10-1/2-W

Now if you go back you will see that the position of the 4th L is the important part of this pattern.

I will put down how many times those patterns formed.
And How I would Bet them.

1st time it formed= LwLwwLwwwwL=Bet Ws to come
2nd time it formed= LLwLwwLwwL=Bet W W to come
3rd time it formed= LLwLwwLwwL= Bet W W to come

Now that's all fine & good to introduce another pattern but did it help us ??

Lets see if it did or not.

Well last time just using the Lw & the LLw patterns we had 18 bets for 11 wins & 7 losses & 2 of those were Zeros.=61% wins

This time we had 25 bets for 15 wins & 10 losses & 2 of those were Zeros=60 % wins

And this time we waited in virtual for 51 spins

Now remember even though this session was a real one it is a relative bad session to win on the Ws but later on you will be glad that its here when we hunt the Ls

Ps its going to give Me great pleasure to kick the shit out of that Zero in future sessions.

Lanky

Ok so following the post I did on the LD=Last 2 dozens that came.

Now we will see if the other pattern will work on the JD=Jump the last dozen that came out.

Now with this pattern there is a case for using Your common sense with it.

The pattern again is Lw LwwLwwL or LwLwwLwww etc

What we are actually doing is seeing the amount of Ws increase between Ls.

Just follow along & You will see what I am getting at.

As before we will still use the Lw & the LLw patterns.

And also see if the new pattern works in conjunction with them.

19=0
7=W
15=W
25=W
33=L
7=W=(Lw x1)
12=L
25=W=(Lw x2)
18=W
15=L
20=L <<next spin bet LLw will form
31=W <<bet Win (and LLw alive)
13=W
7=W
21=W
14=L
20=L
(1)=W <<bet Win (and LLw still dominant)

Now Look back & see its gone LwLwwLLwwwwLLw <<we are here

Now this is where the common sense part will come into our thinking.

Even though its not strictly the single L pattern.

We can see that the Ws have increased in number after the last L has come
On 3 different occasions.

EG:LwL<(1 W)
LwLwwLL<(2 Ws)
LwLwwLLwwwwLL <(4 Ws)

So now this is where some of us will differ.

Is there enough evidence to think that the Ws will now continue.

And if so, Do We bet on them until we lose twice with=LL.

Some of us will & some of us won't.

That's a decision that we will all have to make when we come to it in the future.

I would but that's just My opinion.......Yours might be different.
And that's fine too.
We are either going to be right or wrong.
Lets hope that we are right more times then wrong.

I guess it all comes down to what We do at the time.

That's going to be Your decision to make when it happens.

I am betting the Ws to come until (LL anytime or Lw or Lww).So we continue.

26=W <<bet Won
10=W <<bet Won
34=W <<bet Won
24=W <<bet Won
7=W <<bet Won
19=W <<bet Won
29=W <<bet won
32=L <<bet Lost
(Z)=0..<<bet Lost (ignore the Zero bet)
6=W << bet Won
11=L <<bet Lost

See here its gone LwL=ending the long W run I will wait until 3 Ws come again before I bet the Ws for another long run

23=W <<bet Won
25=W
(Z)=0 (ignore the Zero bet)
7=W <<Three Ws start betting the Ws again
29=W << bet won
19=W <<bet Won
9=W << bet Won
7=L << bet Lost
36=W << bet Win
17=W << bet won
12=W <<bet Won
11=L << bet Lost< (From here we only bet for 3 Ws to come in a row)
35=W <<bet Win
17=W << bet Won
6=W <<bet Won
(1)=L << bet Lost
29=W << bet Won
13=W <<bet Won
22=L << bet Lost

See here the Ws are down to 2 between Ls
I would only bet after L now for the W to form

30=W
7=W
12=L
4=L << bet Lost (ok that pattern is now dead)(bet LLw to form)
13=W << bet Won (LLw dominant)
20=L
9=W <<(Lw X 2)
27=W<< bet (Lww)Won
8=W
24=W
16=L
10=W<<(Lw X 3)Bet W after next L
21=W <<Bet (Lww) Won & both patterns alive
35=W
32=L
(2)=W << bet Won

See looking back its gone.
LLwLwwwwLwww

Another decision for us all to make.

But in this case I won't do it
Why ??

Well the W count is different from W x1- WW x 2 & WWW etc going up

Its gone W x1- W x 4- W x 3 going down.

But still some of you could continue betting the Ws.

I choose no too at this stage.

We continue

16=W<< bet (Lww) Won
6=W
26=W
30=L
34=L << bet Lost (bet LLw to form)(Lw dead)
16=W << bet Won (LLw dominant)
34=W
24=W
4=W

11=L<< (Lw X 2)
16=W
10=W <<Bet (Lww) Won

Last time using just the Lw & the LLw patterns.

We had 14 bets for 11 wins & 3 losses =78.6 % of winners.

Lets see what we have this time.

We had 38 bets for 29 wins & 9 losses=76 % of winners

Lanky

Hi Forum

Here's another way to play the Lw Method By just using the LLw pattern only

Ok because a Mate of mine called Gomez & the enthusiasm that Rubberman shows and who signs off as G .

I am calling this

The G System

Its simple & its come about because Sam & Myself nearly always bet the LLw pattern to form.

I have watched this from day one that I started playing the Lw method of Victor's

And I don't think I have ever seen it lose My Mate Gomez has used it for a month or more & it has never lost on Him either.

Of course there are never any guarantees & its possible that it can lose.

If You use it like this every day you play then it probably will lose some time in the future.

That day could be today or tomorrow.

But its My job to try & keep your losses Low.(So please use a 100 / 200 unit stop Loss)

You don't get too many bets but they are Quality bets with a high degree of certainty to Win.

After every LL You bet for the W to come for 2 bets only.

So if this pattern lost you would have LLLL & we stop betting & wait until the pattern forms again.

I have found that the W will form 95% plus of the time before it reaches the 4th L.

The divisor is 2 & the target is 4

The divisor is never any lower than 2

And it only ever goes up after we have lost to 4 Ls=LLLL

And we will be taking the Zero pocket of Zero 1 2 3

And I will mark the profit this way = [1]P

19- -
7-2/1-<<The 7 is the number spun..2/1 are the Last two Dozens that formed.
Like 2/1 means 2nd & 1st dozens formed

10-1/2-W

Well that's it.

Its not perfect…..But what is ??

At the very least it will help identify the patterns in an easier way.

And then you can move onto other patterns … one at a time maybe.

Some will find this just right for them & Love it.

I think My Friend **Joker** who regularly sends me PM's asking about the health of both My Wife & Myself will like it.

Others will find it too boring or the bets too high.

If there is any questions please put them over in the Question thread for Me.

And state that they are for **The G System.**

If You put them here I will have to delete them.

To Rubberman.

Good on You G for the inspiration for me to put this forward Mate

Lanky

> Lanky my good friend,
>
> In your G system, I find it is very successful to bet after a single L and there is less waiting around. If it loses, I wait for wL then bet again. I only bet once after each L then wait for the next L. I find that I get more than enough winners to make up for the occasional LL. Example: wwL(bet)wwwL(bet)wL(bet)wwwwL(bet)LLLLwwL(bet)w...... 4wins, 1 loss
>
> Your way is fine Lanky, but too much waiting for me, just my thoughts ?
>
> cheers !
>
> hammy

Hammy My Mate.

How are you cobber ?? long time no see Mate.

Hammy I think that You can do what ever you want mate.

Anyway that wins is the right way.

I agonized over putting that here because I knew that's exactly what someone would Say.

But to be fair I did it for those that like to wait & not have too many bets Cobber.

That why I post so others can improve on it...You know that Mate.

And good on You for bringing that idea forward as well Mate.

AS long as we win more times then we lose Then we are all on the right track mate.

Good to hear from you Mate.

Don't be such a stranger in the future cobber,

Your Friend

Lanky

Before we go any further I think this should be covered a little first.

Its here for everyone not just Mark173

Even though I am using his name in this it is still meant for each & everyone of You.

Ok Mark

So you have had Your 1st Roulette kill as I call it.

Now what you have to decide is when & where you are going to come in on the Ws
More often as You want to do.

Well if it was Me then I am guided by the past patterns.
Like if its doing this
LwLwLw=then obviously I bet the W to come after the next L
LwwLwwLww= her I would bet W W to come after the next L
Lwww LwwwLwww=then we can assume that WWW is the bet after the next L

If an L comes to upset those patterns I simply go back to the Lw
Until more Ws or LL comes.

The one dominating thing that I have found is How You choose to bet.
will affect the outcome of it all.
And can be the difference between Winning & Losing.

Lets say the You could Flat bet the Ls & the Ws together with no patterns to follow
And say over a 100 spins you would need 67 wins to 33 losses to win {1} unit

The very same scenario applies even if you can read the patterns correctly.
Its still 67 wins to every 33 losses to win [1] unit if you Flat Bet them.

Sam can do it He is a genius at it. Why? Because He gets the Timeline right.
Of when to Bet for the most numbers of Ws to come His way.

At this point everyone is advised to look at Sam's Way of doing things & see if its right for
You to do it that way.

See that's the thing that **Victor Sam & Myself** have in common we don't care who's way you
use so long as You Win more time then You Lose.
Then for the Three of Us its mission accomplished.

Victor who in His Implementation Thread will cover the Cancellation Betting Plan He uses in
His Play.
Its a stroke of Genius the way Victor uses it.
And again everyone should learn it & see if that way suits them.

I am a little different again with the way I bet.

But I use the 1x1 then 2x2 to start with & if those lose I will then put the losses into the 6
point divisor plan & bet from there.

I will do more Later Roulette is calling Me

Lanky

Ok Lets do this exercise.
Lets use the triggers to bet as Lw x 3 & WWW=3Ws
And see what happens Flat betting them.

33 <<no bet
26 L
10 w
2 L
8 L
24 w
32 w
18 w <3 Ws bet next spin
6 w =bet 1x1 win=[1]P
22 w =bet 1x1 win=1+1=[2]P
35 w =bet 1x1 win=1+2=[3]P
30 L =bet 1x1 lost-2
24 w =We stopped all betting on the last bet to see where the patterns are going.
19 L = That was a good decision that we made

29 w =Ok now that's Lw x 3 bet W after next L comes
7 w =
32 w = 3 Ws in a row start betting again
25 L =bet 1x1 lost-4
4 w =bet 1x1 win -3
33 w =bet 1x1 win-2
1 w =bet 1x1 win-1
7 L =bet 1x1 lost-3
0 -- =bet 1x1 lost-5
22 w =bet 1x1 win-4
26 w =bet 1x1 win-3
24 w =bet 1x1 win-2
28 w =bet 1x1 win-1
27 L =bet 1x1 lost-3
19 w =bet 1x1 win-2
14 L = bet 1x1 lost-4
28 w =bet 1x1 win-3
23 w =
28 w = 3 Ws start betting again
32 L =bet 1x1 lost-5
17 w =bet 1x1 win-4
11 w =bet 1x1 win-3
21 w =bet 1x1 win-2
34 w =bet 1x1 win-1
26 L =bet 1x1 lost-3
5 w =bet 1x1 win-2
17 w =bet 1x1 win-1
29 w =bet 1x1 win= even & [3]P
29 L =bet 1x1 lost-2
19 w =bet 1x1 win-1
7 w =bet 1x1 win=even & [3]P
16 w =bet 1x1 win=1+3=[4]P
29 w =bet 1x1 win=1+4=[5]P
32 L =bet 1x1 lost-2
32 L =bet 1x1 lost-4
9 w

We had 34 bets for 23 winners & 11 lost Bets

Yet we had 23 winning Bets ??? from 34 bets in total

That's nearly 68 % winners & only 1 unit Won ???

For me there is something drastically wrong with this scenario.

More to come Later

Lanky

OK so lets see if there is any difference from Flat betting them to using
The 1x1 & 2x2 if they lose I will put them into the 6 point divisor plan which has its own target profit of 7.
So it would be 6 lost+7 target=13 divided by 6=6/13=3 to bet
If at anytime we get to 7 or less the we are either even or have made a profit & would start again with the 1x1 & 2x2 bets
If when betting with the divisor it loses twice we will put it up 1 from 6 to 7
Or if we win we bring the divisor down 1 from 6 to 5

33 <<no bet
26 L
10 w
2 L
8 L
24 w
32 w
18 w <3 Ws bet next spin
6 w =bet 1x1 win=[1]P
22 w =bet 1x1 win=1+1=[2]P
35 w =bet 1x1 win=1+2=[3]P
30 L =bet 1x1 lost-2
24 w =We stopped all betting on the last bet to see where the patterns are going.
19 L = That was a good decision that we made
29 w =OK now that's Lw x 3 bet W after next L comes
7 w =
32 w = 3 Ws in a row start betting again

25 L =bet 2x2 lost-6 so now I put the lost 6 into the 6 point Divisor plan with its own target of 7…..so its 6+7=13 divided by 6=6/13=3 to bet

4 w =bet 6/13=3x3=19 less 9 back=10 & divisor down to 5/10=3 to bet
33 w =bet 5/10=3x3=16 less 9 back=7 << we have won our 6 lost units back so we start again.

1 w =bet 1x1 win=1+3=[4]P
7 L =bet 1x1 lost-2

0 -- =bet 2x2 lost-6 into the divisor again=6/13=3 to bet

22 w =bet 6/13=3x3=19 less 9 back=10 div down to 5/10=3 to bet
26 w =bet 5/10=3x3=16 less 9 back=7=even & start again

24 w =bet 1x1 win=1+4=[5]P
28 w =bet 1x1 win=1+5=[6]P
27 L =bet 1x1 lost-2
19 w =bet 2x2 win= even
14 L = bet 1x1 lost-1
28 w =bet 2x2 win=even

23 w =
28 w = 3 Ws start betting again
32 L =bet 1x1 lost-2
17 w =bet 2x2 win=even
11 w =bet 1x1=1+6=[7]P
21 w =bet 1x=1+7=[8]P
34 w =bet 1x1=1+8=[9]P
26 L= bet 1x1 lost-2
5 =w =bet 2x2 win=even
17 w =bet 1x1 win=1+9=[10]P
29 w=bet 1x1 win=1+10=[11]P
29 L =bet 1x1 loss-2
19 w=bet 2x2 win=even
7 w =bet 1x1 win=1+11=[12]P
16 w =bet 1x1 win=1+12=[13]P
29 w =bet 1x1 win=1+13=[14]P
32 L =bet 1x1 lost-2
32 L=bet 2x2 lost-6
9 w

So now we have 14 less 6=[8] profit Overall

Same 34 bets with the same amount of winners 23 & still the 11 losses.

But we now have a whopping 700% more profit then we did flat betting.

More to follow Later

Lanky

A fellow named Cox pm-ed me and asked about this. I thought I had it all on my hard drive, but it's gone. I thought it was on the Forum but it's gone. So I wrote it again. Bet I save it this time.

I told Cox I would make a tutorial. What I have in mind is to use this for my test instead of the G.U.T. 4Selecta, etc. A bankroll of 166 would not last a day with those three systems working together if they all have bad days, which they could!

A friend wrote and told me I was taking on too much. I immediately discounted his advice, but he is right. Thanks!!

Here ya go, Cox.

How I use the VLS Lw Methodology..........

First download the software. I will put it in the downloads section if it is not already there.

Begin putting in the numbers. You will see this start to form: LwwLLw...

What we are seeking is a trend in either the last dozen/column or the jump dozen/column. A last dozen/column is where one of the last two to come hits again. These are dozens or columns: 1123321232.....and the next dozen/column is 2. That would be a last d/c as it is one of the last two to come. 32... Now using those same numbers, say we get a 1 d/c. That is a jump as it did NOT hit either of the last two—it jumped somewhere else.

That is all there is to that. You must learn it from front to back or you will fail! Use the software—put in numbers and study!!

That part is Victor's and it is pretty much etched in stone. The following is mine as taught to me by Victor and Lanky and modified to my own liking. What are we looking for? Makes no difference which we are using:

LD....I am looking for this (w)LwLwLw That is a sequence of three singles
JD....or this: (w)LwwLwwLww See how the w repeats?
LC
JC

Note the parenthesis! I will not start a sequence on LL.....like LLwLwLw....I must have wLwLwLw. Same with the Lww Must start wLww.......

Now, we play two ways. For the LwLwLw I wait for the next L and bet for a w. For the LwwLwwLww...I wait for the next L and bet for a w and then another w. Two bets.

VERY IMPORTANT... It makes me no difference how many w are in between: LnolinkswLwLw is really LwLwLw.   LnolinkswwLwwLww is LwwLwwLww. Remember Mr Chips and his Sections:

HG
HG
HG........are all one HG

Same with the w...either just one or just two depending on the sequence. Now the L.....

With the LwLwLw...I stay for two losses.....or LL and then I bet for both LL and Lw. It gets tricky here. Say you have LwLwLwLL.....I ALWAYS ALWAYS ALWAYS bet for LL to become w so in this case I would bet a unit for LL and unit for the second try at LwLwLw.....I know that is tough!

Let's say I get this. My real bet is in {}. LwLwLwL{L}..I lost. That is one loss on my LwLwLw sequence and I give it two. I just encountered an L, so I'm betting for w twice—once for the LL and once for the second chance at LwLwLwL{L}}w}. If I lose I have this LwLwLwL{L}{L} which is my stop for this bet. I must now wait for a new sequence of LwLwLw or LwwLwwLww.

What if I have this: LwLwLwL{L}{w}..Not only did I win on the LL bet, but also on the second bet for LwLwLw and I now have one strike against this run. Another and it's dead. If I get LwLwLwL{L}...I only bet for the LL and not for the LwLwLw as this was strike two and it's dead.

Cox, this is most of it and I'm tired, so I will let you PRINT and study this and then we'll continue!

EDIT: The LwwLwwLww

When I see that sequence I bet for the second and third w. Note: This sequence can and often does morph into the LwLwLw. OK, I have this: wLwwLwwLww....remember I must start clean with a single L at the front. When the next L comes, I bet for w. If I win, I bet for w again. If I win I stop and wait for a L.

If I lose the first bet. It is wL{L}.. Remember, I ALWAYS bet the LL to become LLw. Losing the first bet causes me to bet a unit for the LL and a second unit because we give each sequence two tries. Now, this gets so complicated I just say bet three units a forget why. Well, I'll try...

We are betting for the second and third occurrence in the sequence. L (betting for w) (betting for w) I am betting once for the second chance, once for the third w and once for the LL. I just forget the reason and bet 3 units when I have (w)LwwLwwLwwL{L}. I won this bet a lot of the time.

Now, you absolutely must keep records in addition to using the software. (I also created a take-to-the-casino version of the software only on paper which works very well once you memorize the Lasts and Jumps.) I just write this on paper:

LD

JD

LC

JC

and I note whether there is one strike against the heading by putting a 1 there. Now, if the sequence is this: (w)LwwLwwL{L}{w}, that would cause a 1 as one strike is against the sequence. A sequence can and often does erase that 1 simply by hitting a bunch of Lww after the {L} which lost.

If there is about to be a complete sequence, i.e. (w)LwLwL (I only need another w and an L to bet) I put a . next to the heading. This keeps me on alert that a sequence is about to form.

While people will tell you this will not and does not work, I think it does. I know it won't win every day. I usually quit when I saw LLL in three places. When I logged on and went for a long time without LLL happening, I always made $100. Some days it is very annoying and boring as you will just swap money for what seems like forever. Eventually you will see the LLLs or you will start winning. You just have to stick with it.

I pumped a $200 bankroll to around a thousand. Then, as some will recall, I went for $5 per dozen/column to $25 and lost it all.

I reckon I should give it another try.

Bought a web cam today!! Still won't show my face, but I may do some other things.

Sam

Jump dozen or jump column means that the dozen or column that came was NOT one of the last two.

Example:

Number 6......First dozen
Number 32....Third dozen

At this point, if a 1st or a 3rd dozen comes next, it is called LD; if a 2nd dozen column comes next it "jumped".

"These are dozens or columns: 1123321232.....and the next dozen/column is 2." This was just a bunch of numbers I typed. I'm surprised I didn't have a 4 in there! Take the first three: 112 That's really 12 as you just look at the last two that are different! Perhaps I should have said that. The last two that are different. Sorry.... Anyway 1 2.......next spin...either 1 or 2 is LD 3 is JD.

Sorry.

I am sick and tired of roulette! Thought I'd never say it!

Sam
Very interesting.....

I have a question though. If the LLL situation will kill your bank roll. why not wait for LLL to show then bet for w on the 4th and fifth with a progression? Or Flat bet the 5th with a insurance bet on the 0?

Hi Coxx16 .

The reason that Sam & I bet the LL <<W to come is because over many many many thousands of spins collected & played by Us over an 18 month + time frame.
The LLw pattern will hit approx 83% +
The LLLw hits at approx 90% +

However the most Ls in a row that I have seen on the LD is 9
On the JD is 9
On The LC is 7 (i think)
On the JC is 14 then a zero and another 4 on Column one.

Quote

Also, has anyone tried this with and RNG?

Yes I have played Video Roulette and I had no trouble with it at all.
But Its out here in Australia where our Gameing Laws are strictly policed.

Victors Lw Method has been successful on Live Dealer,Airball & Video Roulette.

Here is a Quote from Star City Australia that I just got for You Mate.

Quote

Vegas Star Roulette is just like a traditional roulette game

except that the result is now determined by a random number generator

and you place your bets via a touch screen on your individual layout.

This greatly increases the level of comfort you experience while playing

as you no longer have to lean and stretch across a layout to place your chips.

Your chances of winning on this game are the same as that of a traditional roulette table.

Your Friend.

Lanky.

Ps: I would never play RNG on-line. I would never trust them. I never play on-line anyway.

Hi Lanky,

Thanks for sharing your insight.According to your stats,I think when a LLLL comes up it will mean taking loss.There are just too many schools of thought in the LW method.Some wait for 2Ls with progression,some 3 Ls with progression,some 4L no progression wait for another repeat,I am also confused as I don't know what is the best method.In progression,I do believe safety is important because it might go out of hand.

Can LLL safe for progression?this is my concern

Hi see_jerek .

Mate no one can say here you do it this way & no other way.
That would be foolish.
I certainly Can't give you a Guarantee that after LLL comes it will always win on a progression.
No-one Can Mate.

In fact when the LLL came Victor taught to turn & bet the L's until nolinks came.

I normally will wait LLLL before turning.But I have had some good wins after LLwL has come too.
But even so playing both ways there is no Iron Clad promises.

Victor ,Sam & I all rely on patterns.(which suit us)(and we differ at times with them)

It all depends on what numbers the roulette wheel is dispersing at the time that will determine if we can win or not.

Its no good Us saying that its safe to bet after LLL.
Because that might be the start of the longest L run in the History of Roulette.

We Never know what that particular wheel or wheels have thrown in way of Patterns or numbers since we were not there.

That's why I normally always record the 1st 20 numbers to get a feel for what is happening now.

Have I walked in & seen LLL and bet ?? Yes... Have I won every time ...NO.

I also rely on the Ws trending like this for example.

LwLwwLnolinksL << You can see that along with the Lw pattern the W's are trending upwards ..not down.
Can I Guarantee it will work all the time ..NO I cant.

Your Friend.

Lanky

Hi Lanky, these are the patterns I have got at bet365.com

LD:LnolinksnolinksnolinkswLwLnolinkswwLnolinksLLnolinkswwLLwwLnolinksLLnolinkswLnolinksLwLw

JD:wLwLnolinksLLnolinksnolinksnolinksLwLLLwwLLLLLnolinkswwLLLwwLLLwwLLLwLww

LC:wLwwLLwLwLwLwLwwLnolinksLnolinkswLwLwwLLnolinksnolinksLLnolinksLLLwLnolinksL

JC:LnolinksnolinkswLwLwLwwLwLLLwLLLLnolinksLnolinksLLLwLnolinksLLnolinkswLnolinksLw

Notice the LLLL and the LLL are concentrating on JD and JC,is this the norm?
For this session the LD seems more stable,in fact when I have game last night it was pretty stable as well.

I had another session in the evening,see

LD:-ww-wLLwLLwLLnolinkswLwLwwLwLnolinkswwLLwLLLLnolinkswwLnolinkswLLwLL

JD:LwLLnolinksLnolinksnolinkswwLnolinksLLwLwLwLnolinks-LnolinksnolinksLLLnolinkswLwwLww

LC:-Lw-LLnolinksnolinksLLLnolinksnolinkswwLLwLwwLw-LLLLLLLwwLnolinksnolinkswLww

JC:-wLLwwLLLwwLnolinkswLLwLLLnolinksLnolinksww-nolinksnolinkswLLwLwLnolinksLwLL

This time round I stay away from columns look at the LLLLLLL no kind of progression can get through that

Hi Jerek.

Mate when the JD & JC Go wLLL << That means the same Dozen/Column has come 4 times in a row.
And I find on average that Happens much more on them then it does on the LD & LC.

I find the LD patterns much more consistant overall.

Lanky.

JD / JC stand for **JUMP** on dozen / column. This means when betting for a "w", you bet the other two dozens/columns which are NOT the last one spun. (You want it to "jump" from last one spun to any of the other two).

On the other hand, when you are hunting L's on JD / JC, you bet the last dozen/column spun. (You are backing the "Jump" to fail).

...you bet the last dozen/column spun (You are backing the "Jump" to fail)...

Cleared it right up - thanks
